Project file Structure

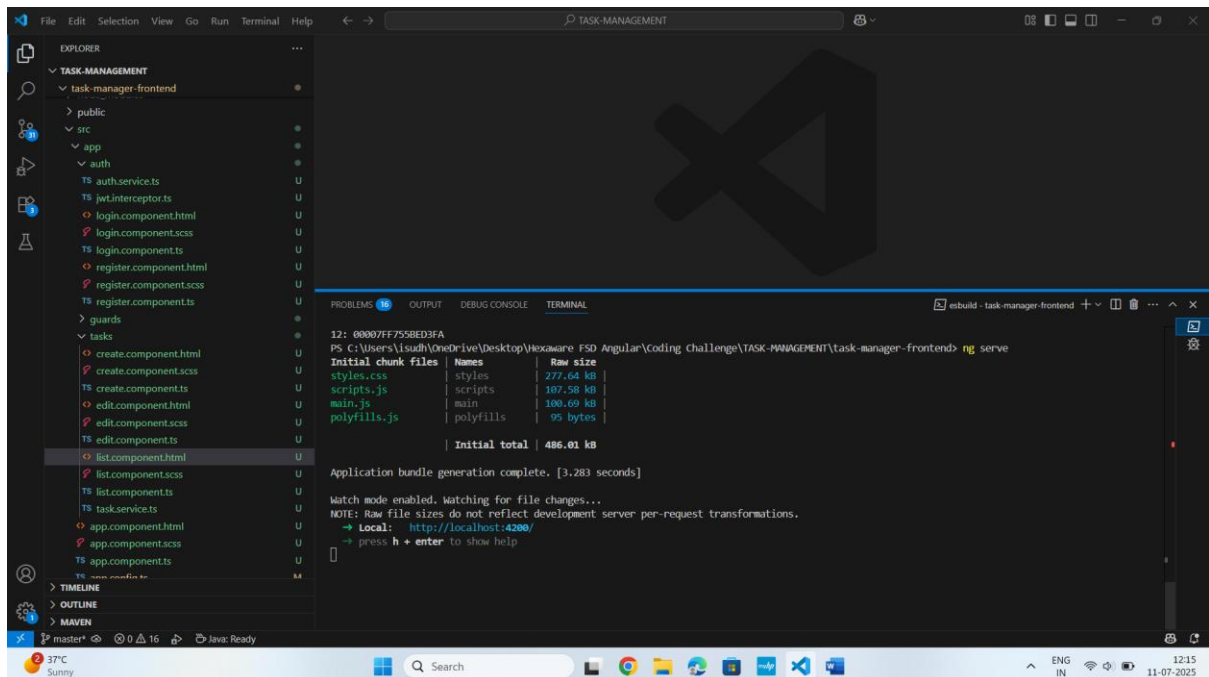

Execution Screenshots

Backend

Frontend

Output Screenshots

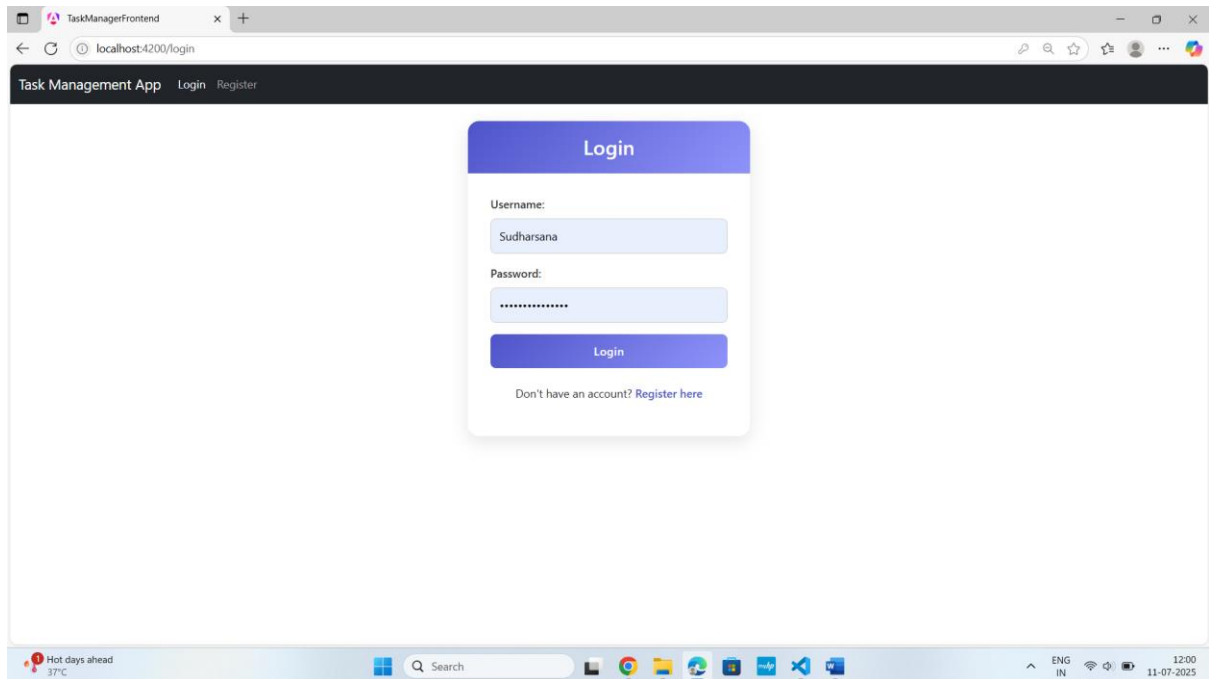

Login

1. Users

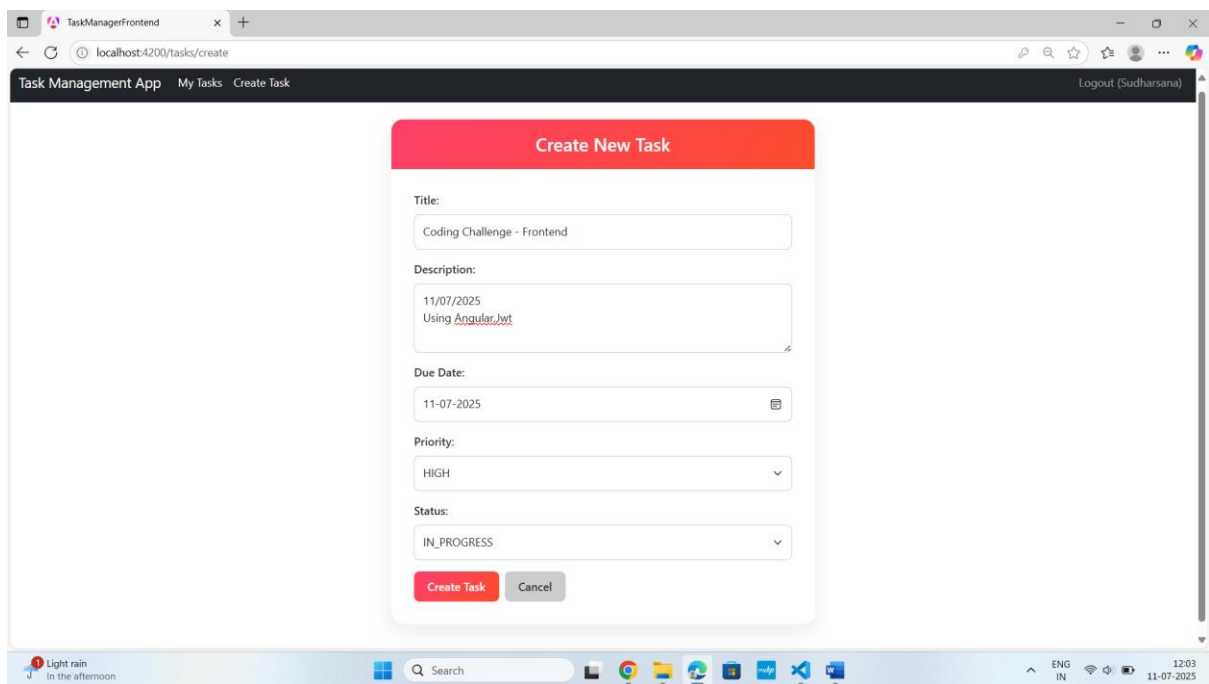

1.Sudharsana

2.User1

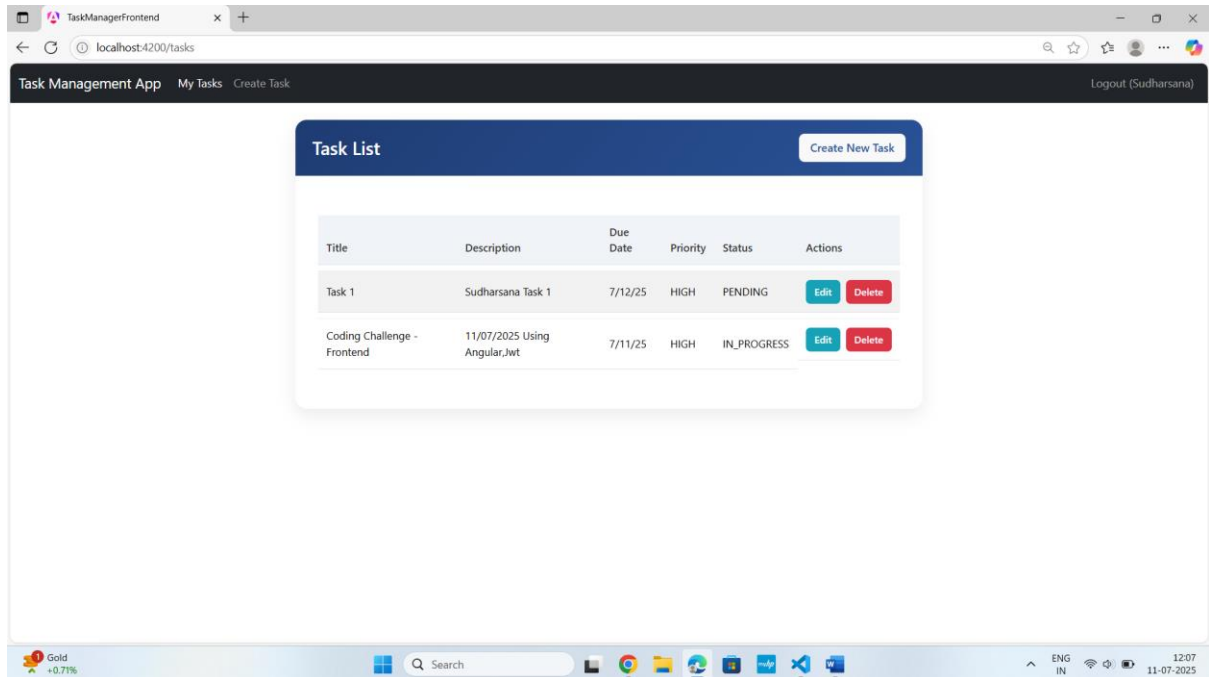

Currently logged in as Sudharsana

2.Create New Task

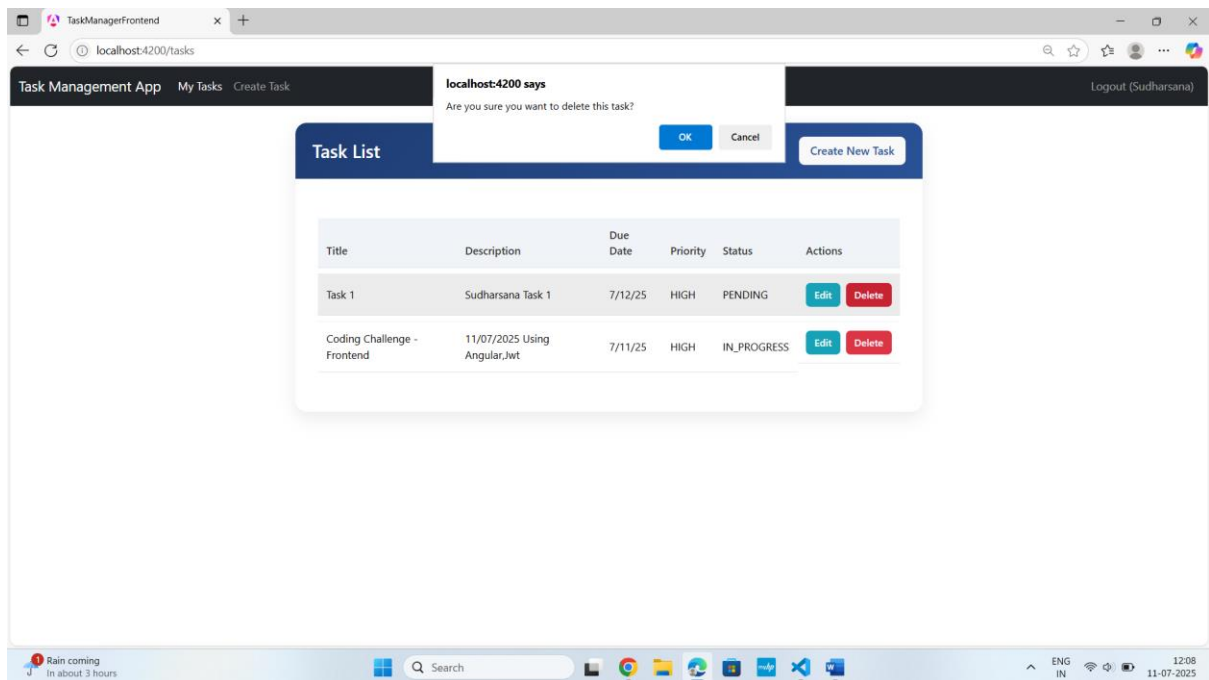

3.Listing all the tasks for Sudharsana (USER)

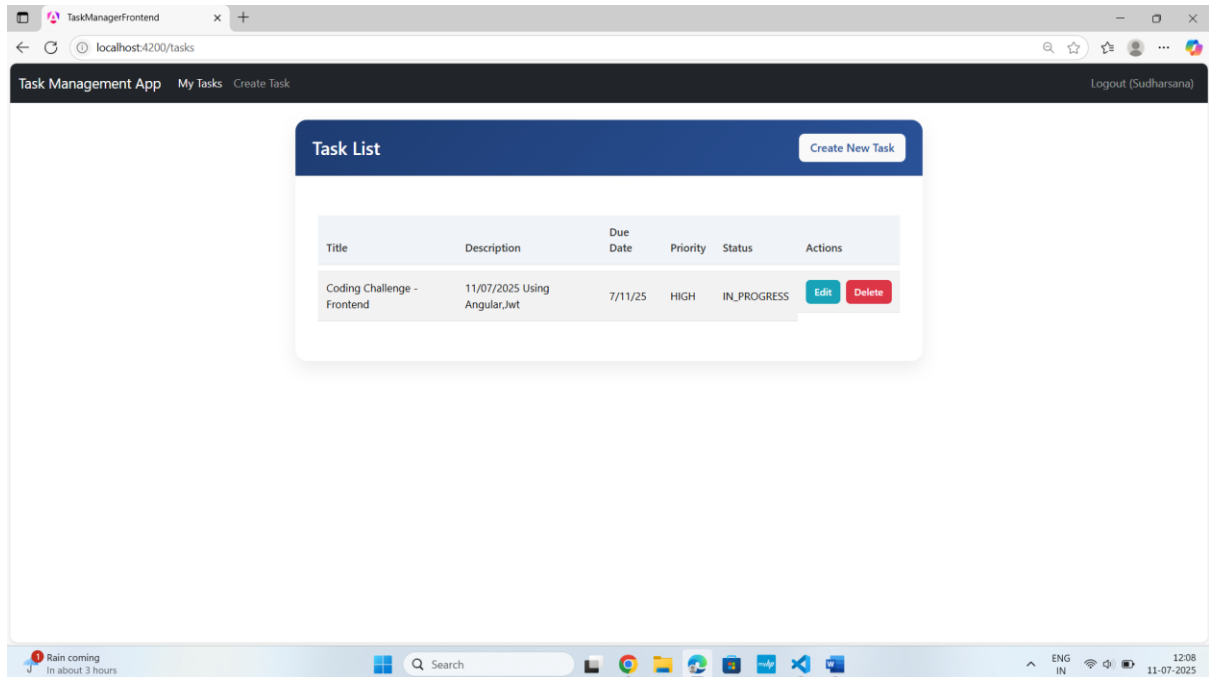

4.Deletion of a task

Before

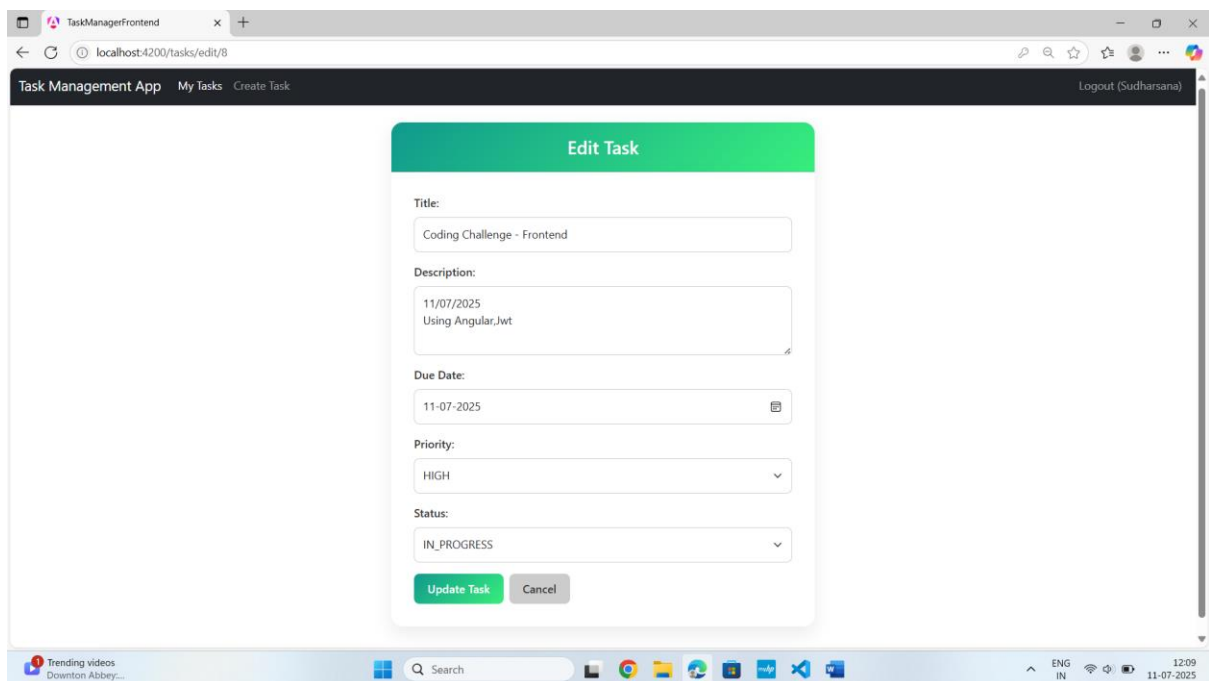

After

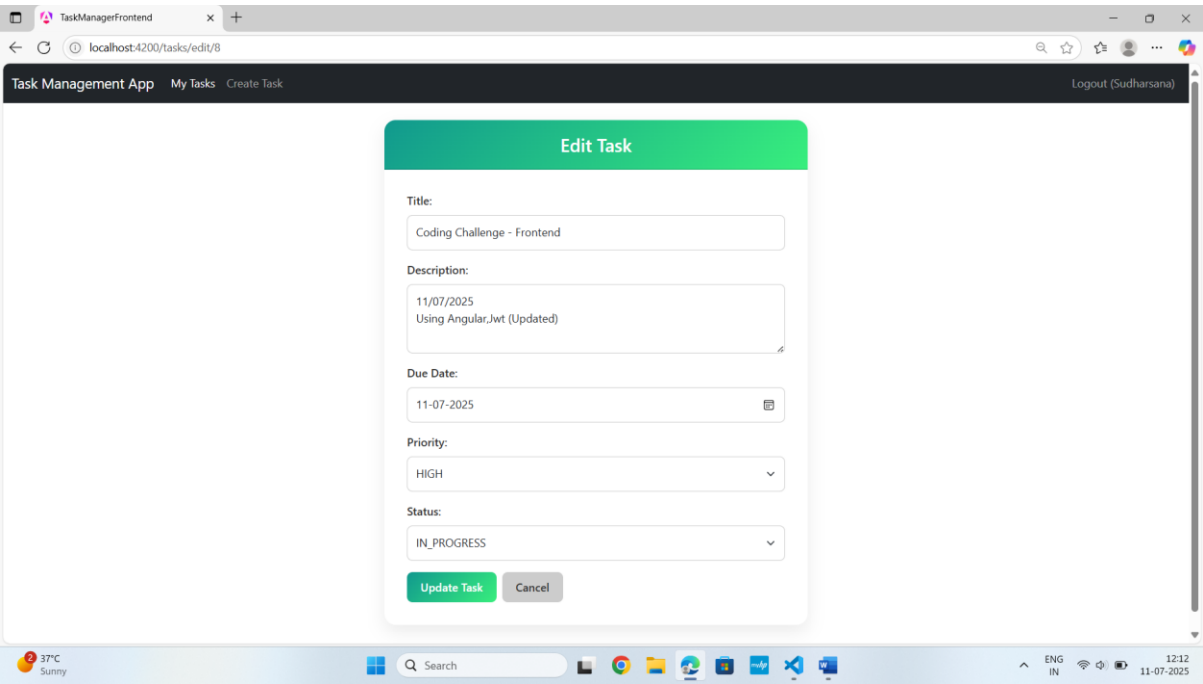

4.Update

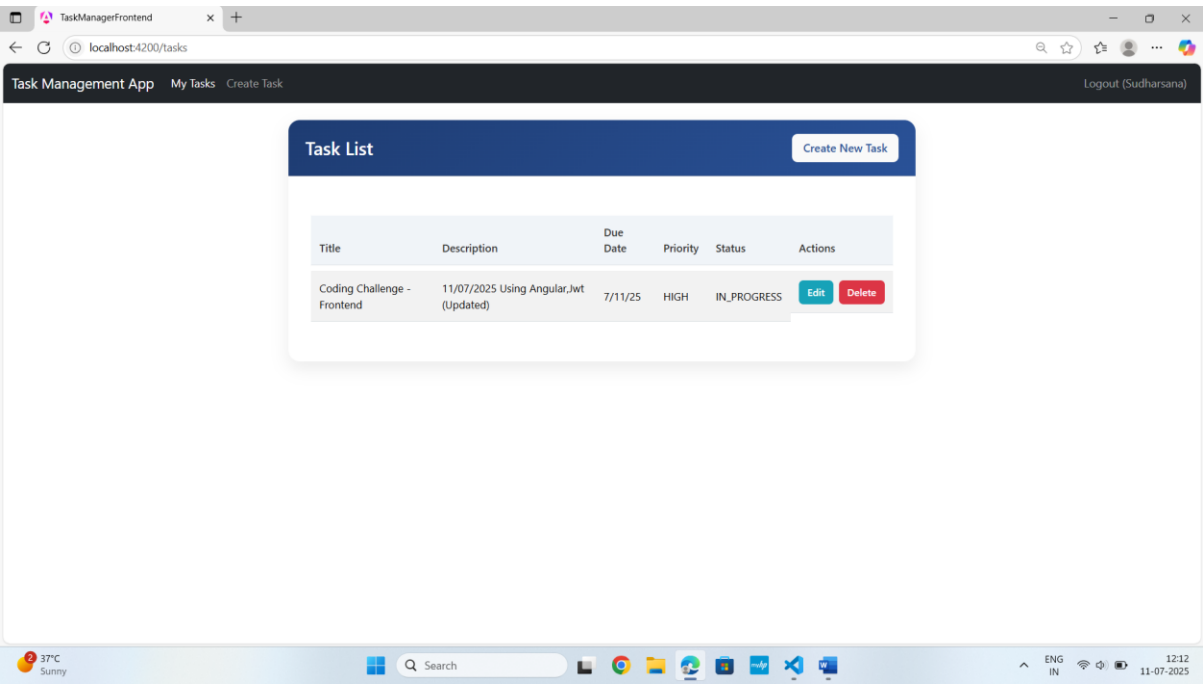

Before:

Changed the Description and Status Column

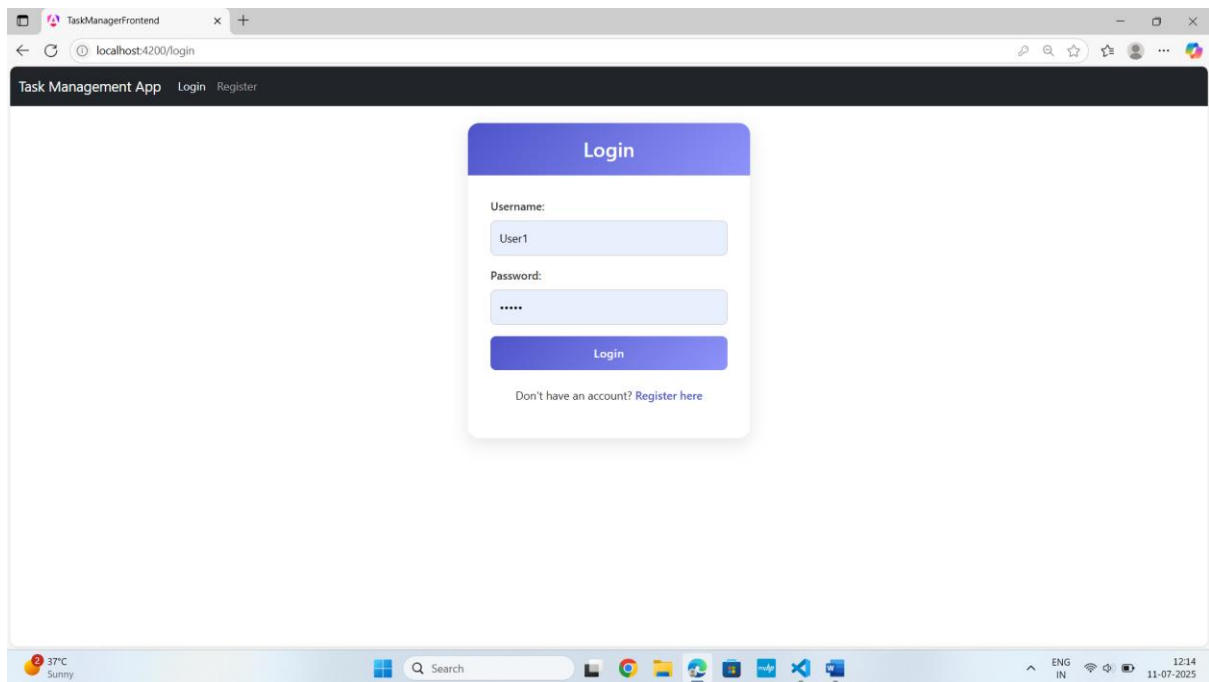

After

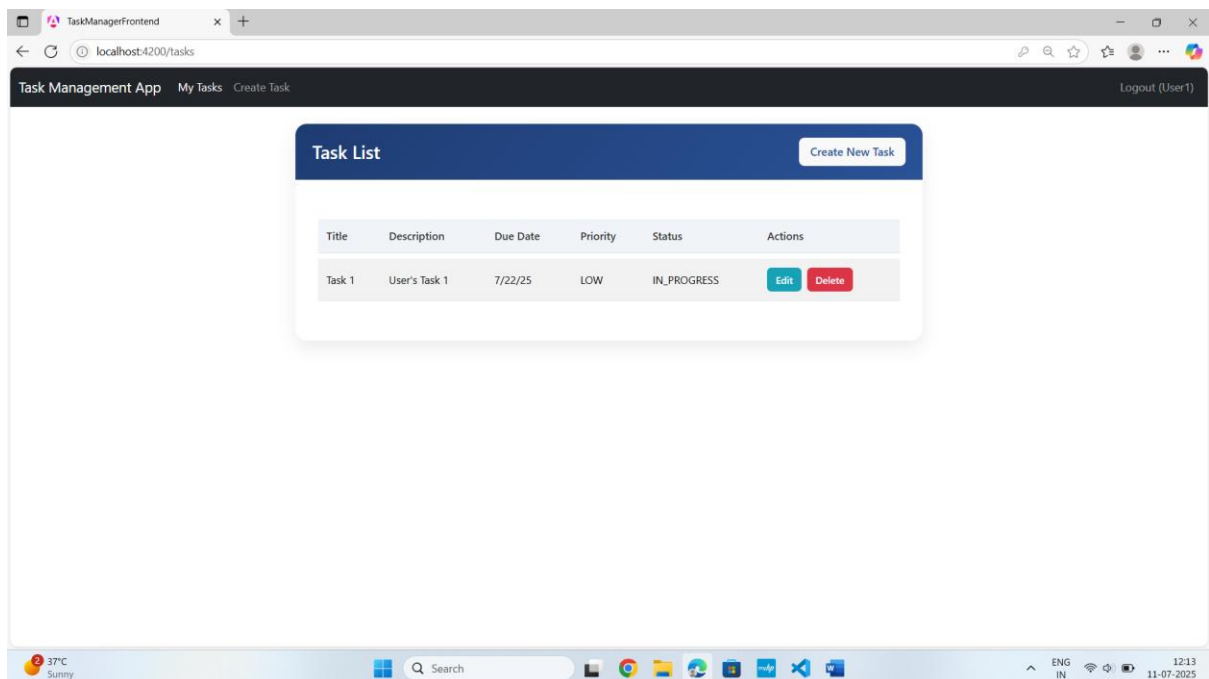

Logged Out as Sudharsana and Logged in as User1 now.

1.Login

2.Tasks specific to User named “User 1”

Hence user-specific filtration where that data is filtered directly based on the identity of the *currently logged-in user* is implemented in my project.
